Terex® Simplicity Inclined Scalping Screens

Simplicity offers a complete line of vibrating scalpers in two-bearing, dual mechanism and four bearing models. Designed to handle run-on-quarry or run-on-mine material, Simplicity scalpers are high-quality, durable machines that are built to last and meet your specific application requirements.

A Simplicity vibrating scalper installed ahead of a crusher performs coarse sizing and provides a controlled, high-capacity flow of material. It eliminates crusher overload due to material surges. It also reduces crusher wear and minimizes productions of fines by bypassing material already at or below desired size.

Simplicity specializes in heavy-duty scalping screens in all sizes and configurations. Whether you're looking for grizzly bar decks, punch plate, rubber decks or multi-sloped decks, we have the solution to your scalping application.
